DIGITAL SOLUTIONS

MYHUB
DIGITAL SOLUTIONS

Your reliable partner in the digital world. We specialize in providing comprehensive digital services, from web and software development to graphic design, online marketing, and customized IT solutions.

PROGRAMMING LANGUAGES

We use modern programming languages and frameworks to create fast, secure, and scalable products. Our technology stack allows you to solve tasks of any complexity, from web development to complex business applications.

JavaScript

The main language for creating a dynamic, responsive user interface. It is used both on the client side and on the server.

PHP

Ideal for agile web development. It is widely used to create administrative panels, landing pages, catalogs, and online stores.

Python

A universal solution for web applications, automation, data analysis, and working with AI. It copes well with tasks of varying complexity.

Java

It is suitable for developing complex and reliable server systems that process large amounts of data and require high fault tolerance.

TECHNOLOGIES

We use proven and modern technologies to create reliable, fast and scalable digital solutions. We select the stack for the client's tasks — from small websites to complex corporate systems.

As a **BACKEND** framework, we use Java for developing highly loaded and reliable systems, PHP for flexible web services and working with popular CMS, as well as Python for automating processes, integrations, and data analysis.

At the **FRONTEND** level, we create fast and user-friendly interfaces using HTML5, CSS3, and JavaScript, complementing them with libraries like React for complex interactive applications and Alpine.js is for the lungs. For styles, we choose Tailwind CSS.

When working with **DATABASES**, we use MySQL and PostgreSQL when structured and reliable information storage is important, and MongoDB when flexible work with large amounts of data is required.

For **INFRASTRUCTURE**, we use Docker to create isolated and managed environments, Nginx for high-performance web servers, and Git for version control and effective teamwork.

Do you need a project on a modern and reliable stack?

We will assemble the optimal technological solution for your goals.

WEB DEVELOPMENT

In the digital age, a website is the face of a company and a powerful sales tool. We will develop for you fast, secure and user-friendly web solutions that work for results.

Corporate Websites

We create presentable websites for companies with a well-thought-out structure and modern design. Each project includes adaptive layout and convenient content management.

Online Stores

We are developing full-featured e-commerce solutions with a convenient product management system, secure payments and marketing tools to increase sales.

Web Applications

We create complex business applications with individual logic of work: CRM systems, personal accounts, automation services and other web solutions for your tasks.

Landing Pages

We make high-conversion single-page ads for advertising campaigns that effectively turn visitors into customers.

Technical Support

We ensure the continuous operation of your website: updates, bug fixes, anti-hacking and development advice..

Audit and Revision

We are improving existing websites: we speed up loading, fix bugs and improve usability.

GRAPHIC DESIGN

A strong visual style is the first thing that sticks in your mind. We create a design that works for your image, sets you apart from the competition, and speaks for you.

Corporate Identity

We create a memorable logo, color palette, fonts and corporate identity elements. Everything you need for a recognizable brand.

Web Design

UI/UX design of websites, landing pages, and mobile applications. We combine aesthetics with convenience to make it beautiful and understandable for users.

Package Design

We develop creative and practical packaging that highlights the product on the shelf and influences the purchase decision.

Design for Social Networks

Templates, stories, covers, banners, and posts are all in the same style, tailored to your audience and promotion goals.

Account Management

We write texts, create visuals, respond to comments — you just watch your reach grow.

Polygraph

Business cards, booklets, banners, posters, presentations. We are preparing layouts for printing and for digital distribution.

VIDEO MARKETING

Video is one of the most effective ways to convey an idea, talk about a product, and build trust. We create videos that work: inspire, explain, sell.

Promo Videos

Short and powerful. An exciting video that shows the essence of your product or service in 30-60 seconds.

Social Network Videos

Videos for Instagram, TikTok, YouTube and other platforms are adapted to the format and behavior of your audience.

Animated Videos

2D/3D graphics, infographics, explanatory videos. When you just need to explain the difficult, it's your choice.

Video Presentations

For businesses and investors. Clearly, visually and convincingly, we will tell you about your product with the right emphasis..

Corporate Videos

Show the face of your company. Interviews, office, processes, values — everything that builds trust and brand.

Motion Design

Dynamic elements for video clip design, intro, logo animation, and video branding.

ONLINE MARKETING

In today's world, 90% of buyers start searching for goods and services on the Internet. We create effective promotion strategies that help your business find customers and increase sales.

Contextual Advertising

We set up advertising campaigns that attract target customers. We work with any budget, from start—up to scaling.

SEO Promotion

Optimizing your website for search engines. Improving your position in search engines will ensure a steady stream of free traffic.

SMM Promotion

Instagram, Facebook and other platforms are where we create and maintain business accounts. We select an individual content and advertising strategy.

Targeted Advertising

We set up accurate advertising based on user interests. We bring clients to where they already spend their time — on social media.

Email Marketing

We help to establish regular communication with clients through letters and mailing lists. We increase repeat sales and loyalty.

Analytics

We provide clear reports, analyze data, and offer solutions based on real numbers.
